Local critical-current loading of the optimised 28-layer REBCO racetrack coil

131.9 A per turn, at the end of a 2 h constant-power ramp · peak 99 % of J_c · 0 of 29,364 coil cells above J_c

Straight-leg cross-section (x = 0)

End-cap cross-section (y = 0, through the cap tip)
